

AGRICULTURE & LAND USE

We are drawing together leaders from across the country to identify the priority breakthroughs needed for the Australian agriculture & land use sector to balance the needs of diverse stakeholders and protect our natural resources.

Meeting future food demand in a sustainable way will require major advances in productivity, market systems, natural resource management and governance. As the world's population grows, demand for food and agricultural products will continue to rise. These pressures compounded by global economic disruptions and climate change, will strain the world's resources in a way that could limit future prosperity and contribute to conflict and population displacement.

This industry working group will bring together a diverse group of stakeholders from business, government, investors, NGOs and academia in a highly interactive format of presentations, panels and roundtable discussions. Participants will identify and recommended the priority breakthroughs needed to:

- decarbonise the agriculture and landuse sector
- strengthen climate resilience
- support Australian farmers in the transition to a net zero
- build a regenerative agriculture export economy

Participants represent diverse perspectives across the agriculture and landuse sector including landowners, farm associations, food production, industrial farming, food manufacturing, vineyards, cattle stations, supermarkets and food & beverage retail

Organisations presenting and participating in these discussions include **Aboriginal Carbon Foundation, Agricultural Innovation Australia, Agrifutures, AgriWebb, Airseed Tech, AMP, ARENA, Australian Agritech Association, Australian Ethical, Australian Farm Institute, Australian Forest Products Association, Australian Women in Emergencies Network, Climate Revive, Coles, CSIRO, Dairy Australia, Department of Agriculture, Water & the Environment, Dunkeld Pastoral, Edge Environment, Farmers for Climate Action, Ferrero, Food Buy, Greening Australia, Griffith University, IAG, Indigenous Carbon Industry Network, James Cook University, Kilara Capital, Koda Capital, Macquarie, New Forests, NSW government, OpenSC, Our Trace, Pollination, QIC, SnackSavers, Soil Carbon, SunRice, Tenacious Ventures, The Nature Conservancy, Tipperary Group, Unilever, University of Queensland, Urban Plant Growers, Volt Farmer, Woolworths, WWF**
